AURUNA® 568 EF-18

GOLD-SILVER ELECTROLYTE FOR ELECTROFORMING

For More Than 30 Years Used Worldwide for Hollow Jewellery

The gold-silver electrolyte AURUNA® 568 EF-18 stands for decades of Umicore experience in electroforming with mandrels made of wax and metal.

For more than 30 years hollow jewellery has been produced worldwide with AURUNA® 568 EF-18. Among others, renown manufacturers produce creole earrings, pendants, brooches, chains, chain clasps and bangles, but also statues and watch parts with AURUNA® 568 EF-18.

The electrolyte convinces with layer thicknesses of 150 to 200 micrometer, a fine gold content of 18 ct and is easy to maintain. The weight distribution can be monitored within narrow limits very closely.

Advantages

- Gold-silver electrolyte for electroforming
- Suitable for cores made of wax and metal
- Layer thicknesses of 150 to 200 micrometer
- Observance of fineness and weight distribution within narrow limits
- High hardness of about 220 HV

Applications

- Electroforming
- Hollow jewellery

AURUNA[®] 568 EF-18

GOLD-SILVER ELECTROLYTE FOR ELECTROFORMING

TECHNICAL SPECIFICATIONS

Electrolyte characteristics		Coating characteristics	
Electrolyte type	Alkaline-cyanide	Coating	Gold-silver
Metal content	15 g/l Au 3 g/l Ag	Alloy composition	77 wt. % Au 23 wt. % Ag
pH value	10.0 - 10.2 (at 45 °C)	Caratage	Approx. 18.5 carats
Operating temperature	45 °C	Colour of deposit	Pale yellow
Current density range	0.6 - 2.0 A/dm ²	Brightness	Semi-bright
Plating speed	Approx. 60 µm/h at 1.5 A/dm ²	Hardness of deposit HV 0.015 (Vickers) approx. values	220 HV
Anode material	Pt-Ti (Typ PLATINODE [®] Pt/Ti)	Max. coating thickness	Several 100 µm
		Density of the coating	Approx. 15.8 g/cm ³
