RHODUNA® 275 Black

RHODIUM ELECTROLYTE

Pen rhodium plating for black bright coatings

With RHODUNA® 275 Black, selective rhodium plating is possible with a pen plating unit. Small surface elements of components are rhodium-plated using direct current and by wiping contact with the tip of the pen. The process is mainly used to apply decorative patterns to jewelry.

RHODUNA® 275 Black deposits bright and anthracite to black coatings. Depending on the voltage, values in the $L^*a^*b^*$ color space of 61.0 / 1.1 / 4.0 (at 10 V) are possible, while providing typical coating thicknesses of around 0.1 μm . RHODUNA® 275 Black is formulated to deliver fast coverage speed and high deposition efficiency.

The electrolyte can also be used for rack operation.

Advantages

- Bright anthracite to black rhodium coatings
- Uniform coating thickness
- Crack-free up to 0.1 μm
- Easy handling
- Fast coverage speed
- High deposition rate

Applications

- Jewelry
- Watches
- Writing implements
- Spectacle frames
- Fittings

RHODUNA® 275 Black

RHODIUM ELECTROLYTE

TECHNICAL SPECIFICATIONS

Electrolyte characteristics pen plating

Electrolyte type	Strongly acidic
Metal content	2 g Rh / 100 ml
pH value	< 1
Operating temperature	Room temperature (20 - 40 °C)
Voltage	8 - 10 volts (max. 12 volts)
Deposition speed	Up to 0.1 µm/min

Electrolyte characteristics rack operation

Electrolyte type	Strongly acidic
Metal content	2 g Rh / 100 ml
pH value	< 1
Operating temperature	Room temperature (20 - 30 °C)
Current density	1.5 (0.5 - 3.0) A/dm ²
Deposition speed	approx. 0.05 µm at 2.0 A/dm ²
Anodes	Platinized titanium, e.g. PLATINODE® coated with 2.5 µm of Platinum

Coating characteristics

Coating	Rhodium
Purity	99.9 wt.% Rh
Colour of deposit	anthracite to black L*a*b* color range: 61.0 / 1.1 / 4.0 (at 10 V)
Brightness	Bright, brilliant
Max. coating thickness	approx. 0.1 µm
Hardness of deposit HV 0.015 (Vickers) approx. values	approx. 600 HV
Density of the coating	approx. 12 g/cm ³
